Highlight negative results to improve science

October 2013

The Economist

Problems with scientific research

How science goes wrong

Confidence

It's ok to make mistakes

**It takes time to
understand new ideas**

Creativity

**Solve realistic,
real-life problems**

**Explore, discover, and
question assumptions**

Number Systems

Pythagoras
c. 600 BCE

Brahmagupta
c. 600 CE

Fibonacci
1175 - 1250

Descartes
1596 - 1650

Rhind Papyrus
1550 BCE

Diophantus
c. 250 CE

Al-Khwarizmi
780 - 850

Cardano
1501 - 1576

Cantor
1845 - 1918

Euclidean Geometry

Axiom 1

Axiom 2

Axiom 3

Axiom 4

Axiom 5

Euclidean Geometry

Trisecting the
Angle

Doubling the
Cube

Squaring the
Circle

Euclidean Geometry

René Descartes
1596 - 1650

Non-Euclidean Geometry

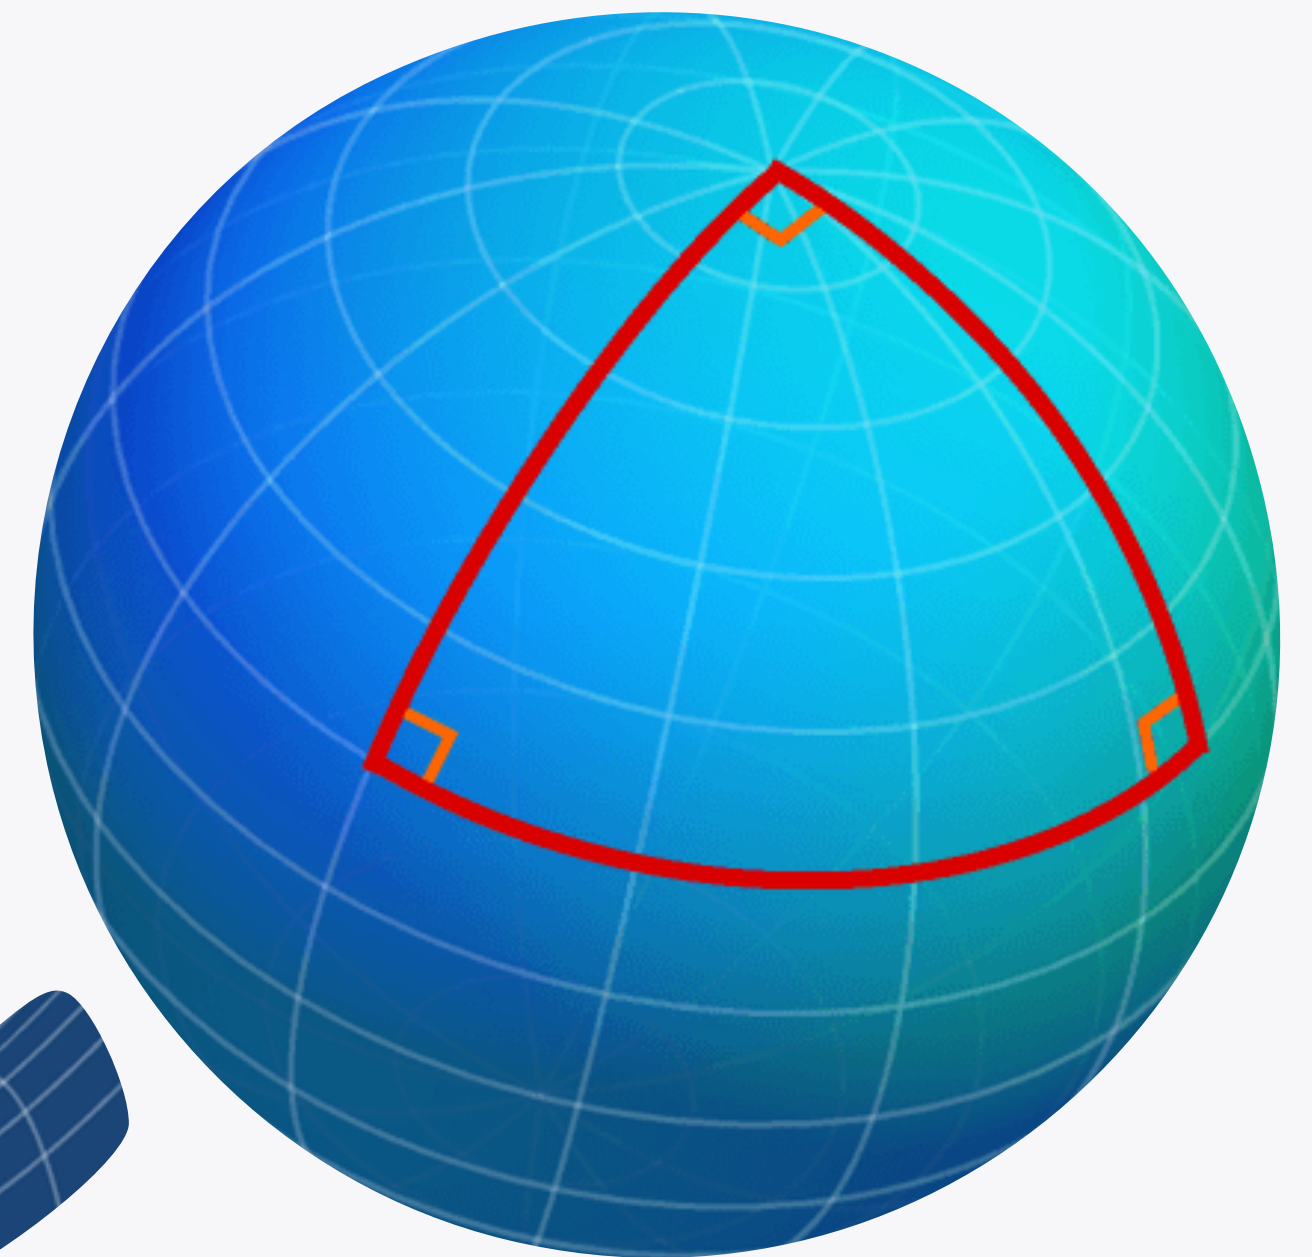

C. F. Gauss
1777 - 1855

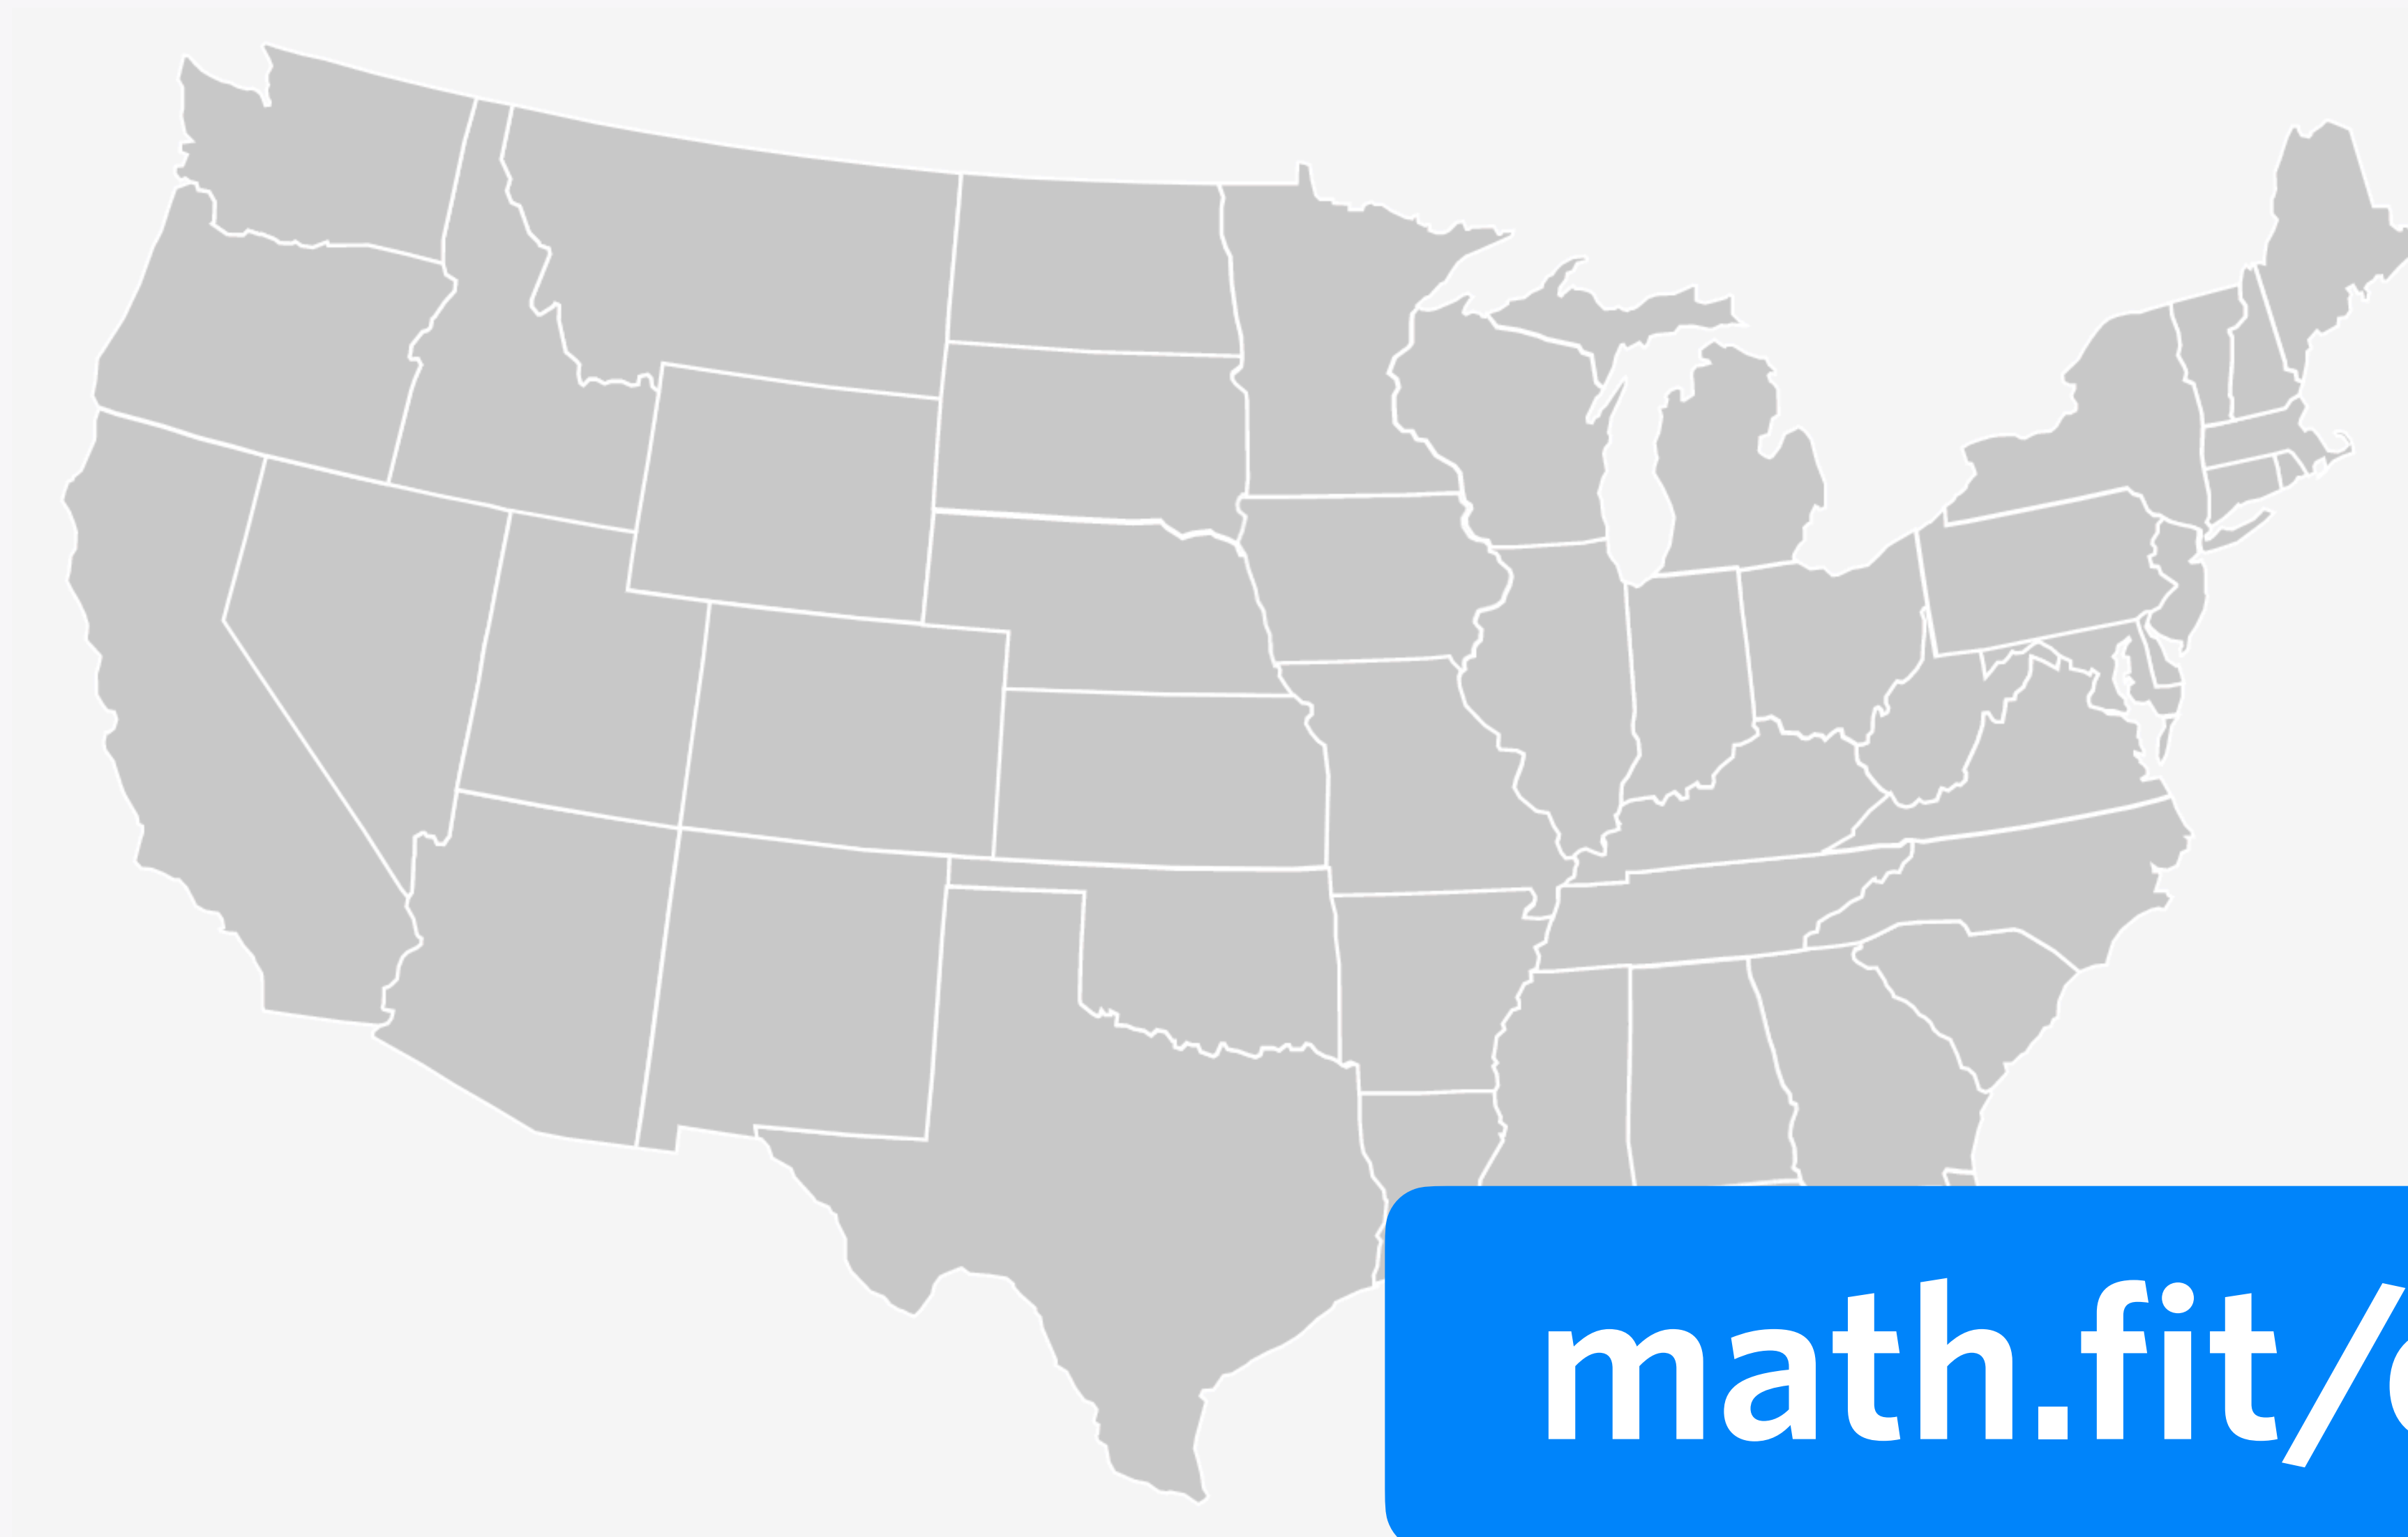

János Bolyai
1802 - 1860

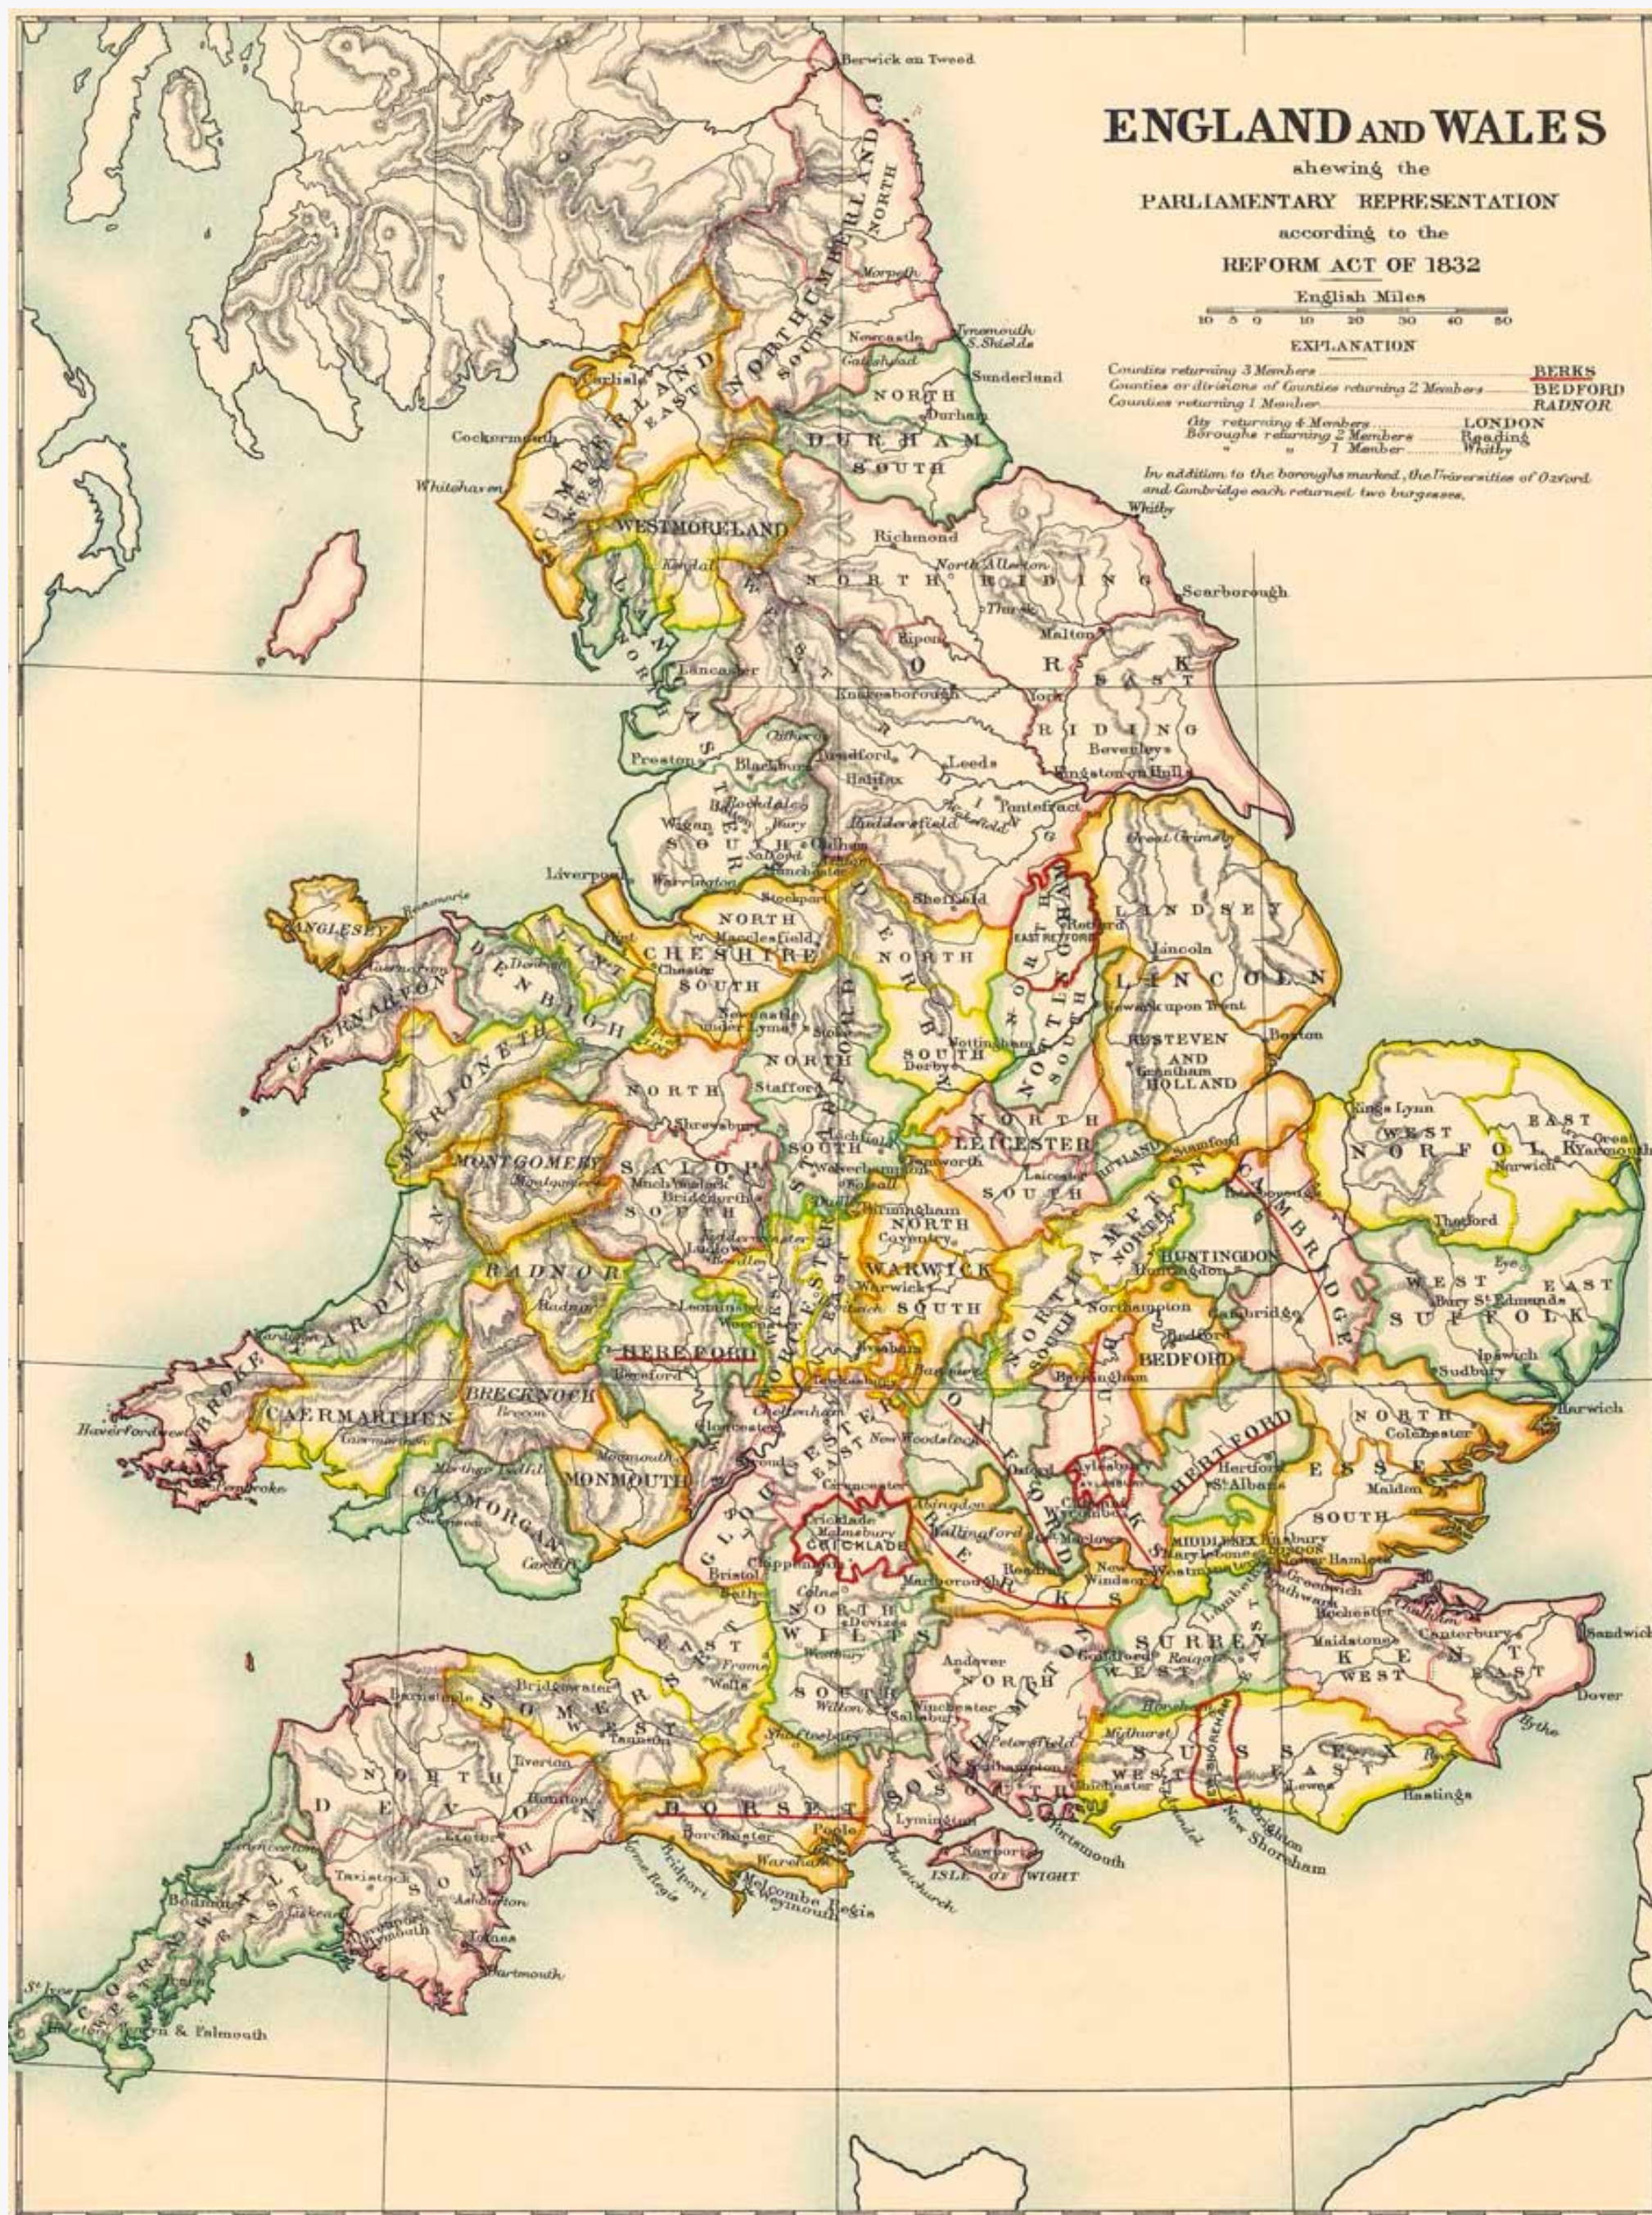

Nikolai Lobachevsky
1792 - 1856

Map Colouring

math.fit/conf

Map Colouring

1852 – Problem by Francis Guthrie

1879 – Proof by Alfred Kempe

1880 – Another proof by
Peter Guthrie Tait

1890 – Kempe's proof is wrong

1891 – Tait's proof is wrong

Map Colouring

1976 – Kenneth Appel and Wolfgang Haken
find a proof using computers

Three Body Problem

Three Body Problem

Henri Poincaré
1854 - 1912

Fermat's Last Theorem

Andrew Wiles
born 1953

$$x^n + y^n = z^n$$

Königsberg Bridges

Leonhard Euler
1707 - 1783

Problem-Solving Strategies

Try many examples

- simpler versions
- edge cases

**Abstraction and new
representations**

**Make new
connections**

Three Utilities

Problem-Solving Strategies

**Ask the right
questions**

**Is there even
a solution?**

Try many examples
– simpler versions
– edge cases

**Abstraction and new
representations**

**Make new
connections**

**Examine
assumptions**

**Approximate
and simplify**

**Justify and
critique**

Perfect Numbers

$$6 = 1 + 2 + 3$$

$$28 = 1 + 2 + 4 + 7 + 14$$

List of unsolved problems in mathematics

From Wikipedia, the free encyclopedia

*This is a **dynamic list** and may never be able to satisfy particular standards for completeness. You can help by **expanding it** with **reliably sourced** entries.*

Since the **Renaissance**, every century has seen the solution of more **mathematical problems** than the century before, yet many mathematical problems, both major and minor, still remain unsolved.^[1] These unsolved problems occur in multiple domains, including **physics**, **computer science**, **algebra**, **analysis**, **combinatorics**, **algebraic**, **differential**, **discrete** and **Euclidean geometries**, **graph**, **group**, **model**, **number**, **set** and **Ramsey** theories, **dynamical systems**, **partial differential equations**, and more. Some problems may belong to more than one discipline of mathematics and be studied using techniques from different areas. Prizes are often awarded for the solution to a long-standing problem, and lists of unsolved problems (such as the list of **Millennium Prize Problems**) receive considerable attention.

This article is a composite of unsolved problems derived from many sources, including but not limited to lists considered authoritative. It does not claim to be comprehensive, it may not always be quite up to date, and it includes problems which are considered by the mathematical community to be widely varying in both difficulty and centrality to the science as a whole.

Contents [hide]

- 1
- Lists of unsolved problems in mathematics
- 1.1
- Millennium Prize Problems
- 2
- Unsolved problems
- 2.1
- Algebra
- 2.2
- Analysis
- 2.3
- Combinatorics
- 2.4
- Dynamical systems
- 2.5
- Games and puzzles
- 2.5.1
- Combinatorial games
- 2.5.2
- Games with imperfect information
- 2.6
- Geometry
- 2.6.1
- Algebraic geometry
- 2.6.2
- Differential geometry

The **Riemann zeta function**, subject of the celebrated and influential unsolved problem known as the **Riemann hypothesis**

Sequences

$$x_{n+1} = x_n^2$$

Complex Sequences

$$x_{n+1} = x_n^2 + c$$

Julia Sets

Julia Sets

The Mandelbrot Set

Benoit Mandelbrot
1924 - 2010
